Data Options

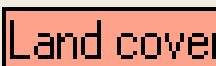

When Land cover is selected in 'Options/Elevation data/Land cover' and the Land cover data file is present on your computer, enabling 'Land cover' on the 'Toolbar Options' pane will show the Green background button below beyond Region 8 of the toolbar.

The **Green** background shows the the data is available, and is being used in propagation calculations. A click on the button changes the background colour to **Red**, disabling the use of the data in the calculations.

Where the data file is not available on the computer only the **Red** background will be displayed.

A Green button shows data is available and in use.

A Red button shows that the data is unavailable for use.
